"The Tradition Continues"

**POWER-PAK**<sup>®</sup>  
LP700

400 lb. independent leg press designed for home and commercial use. May be used with PP1000 or PP2000.

## POWER-PAK DESIGN

In keeping with our 45 year tradition of quality, the Universal Gym Equipment Power Pak series was designed with function and versatility in mind. We feel so strongly about our Power Pak's high level of quality that we're offering a LIFETIME WARRANTY on the complete unit for the entire series. Our number one goal is to provide correct biomechanical function for all users at all times. Most home gyms prevent users from obtaining full cable travel during exercise movements. The Power Pak series' unique, full travel cable system allows a full range of movement on all stations. Our cable system not only provides variable weight ratios for different exercises, but also allows us to offer, for the first time in a home gym, the ability to perform crossover movements without the aggravation of cables wrapping around your arms. The Power Pak's patented **Natural Motion** handles (a feature found only on the Power Pak series) essentially eliminate wrist, elbow and shoulder joint stress.

This is an exclusive feature found only on UGE Power Pak series gyms. This unique feature creates a cushion fit for all users, a necessity for sports training and physical therapy applications. The articulating movement of the free-adjusting handles allows the user unlimited wrist positions.

Continuing in our high standards, the LP700 leg press has been designed to offer optimum results through proper biomechanics. Our uniquely curved footplate maximizes all muscle groups utilized in each exercise while keeping pressure off the ankles. The walk-through feature on the LP700 insures easy access for sitting and allows great flexibility in entering and exiting the workout area. Remember, proper lower body training is very important to the overall development of the body. With the LP700 you can be confident you're getting the most out of your workout!

## POWER-PAK LP700 SPECIFICATIONS

- Frame – Commercial grade 11-gauge steel, 2x3 inch with electrostatic mid-night blue finish.
- Cables – 2000 lb. tensile, aircraft grade cable with nylon coating.
- Pulleys – Fiber reinforced nylon pulleys with commercial grade, sealed ball bearings.
